

BizInsight

Prepared By: Shijo Varghese

Abstract

SDG Goals:

- SDG 8 – Decent Work and Economic Growth
- SDG 9 – Industry, Innovation and Infrastructure
- SDG 12 – Responsible Consumption and Production

BizInsight is an AI-powered business analytics and management platform designed to help businesses make smarter and data-driven decisions through intelligent insights and automation. The project focuses on collecting, analyzing, and visualizing business data efficiently to improve productivity, customer engagement, financial performance, and operational management.

By integrating Artificial Intelligence, Machine Learning, and predictive analytics, BizInsight helps organizations identify business patterns, forecast future trends, and improve strategic planning.

BizInsight also includes customer sentiment analysis and competitor analysis modules that allow businesses to better understand customer feedback and market competition. The system uses modern AI technologies and intelligent recommendation systems to generate valuable business insights .

The project is developed using modern technologies such as React.js, Node.js, MongoDB, Python, and TensorFlow, providing a secure, scalable, and user-friendly environment suitable for small and medium-scale enterprises. The project strongly aligns with Sustainable Development Goals related to economic growth, industrial innovation, and sustainable business practices.

Overall, BizInsight serves as a practical and intelligent solution for modern business intelligence, smart enterprise management, and AI-driven business transformation, helping organizations grow smarter and compete effectively in the digital era.
